

## Bringing a SAS Dataset into JMP Pro

Suppose you have completed work on the SAS Server/Cloud under SAS® OnDemand for Academics and you want to bring a dataset into JMP Pro for additional analysis and graphics. JMP Pro offers a facility for doing this.

Go to **File/SAS/Browse Data** to bring up a window showing available data.

Click on **SASApp**.

Under **Libraries** click on **WORK** to show all of the SAS datasets that are currently active and available for downloading into JMP Pro.

Click on the SAS dataset you want to work with and JMP Pro will list the columns in the dataset and show the first few lines of that dataset.

Finally, click on **Import** and the data will download into JMP Pro.

You can then save the data with **File/Save**.

There are options available for the data download and the format of the saved data.
